*Accessories may vary in style

Automation Accessories

Radio Transmitter

Supply & program one radio transmitter.

Keypads

Supply & install a wireless radio keypad.

Supply & install a wired keypad.

Supply & install a illuminated wired keypad.

Safety Photocells

Supply & install an additional set of safety photocells for person & vehicle detection using infra red beam across either side of the gate opening.

Safety Edge

The safety edge is used when a gate is opening onto a trapped point e.g. against a brick wall or on a sliding gate. When the edge is pushed in it sends a signal to the gate control board telling it that an object is in the way & stops the gate.

Induction Loop

Cut into your drive the induction loop detects the metal of your car and sends a signal to the control board to open the gates.

Automation Accessories

*Accessories may vary in style

Electric Latch

The electric latch can be used in two situations. The first would be in the middle of two large leafed gates to keep them locked together. The second would be as a ground latch to lock one leaf into a floor catch. The second situation would normally be used in conjunction with a magnetic lock.

Magnetic Lock

Supply & install an external magnetic lock for the centre of large leafed gates.

Flashing Warning Light

To supply & install a Came warning flashing light.
